---

Projects

Skyscanner Front-End Software Engineering Virtual Experience (September 2024)

- Built a web application using React as part of a job simulation at Skyscanner.
- Developed a travel date selection page using Skyscanner's open-source Backpack React library.
- Customized the application and ran automated tests to ensure functionality.

Recipe-Hub – Personal Project

- Integrated an API to create a food recipe search and upload website.
- Developed using MVC architecture for clean code and maintainable structure.

Shortly URL – Personal Project

- Developed a website allowing users to shorten URLs for easy sharing.
- Used local storage to persist shortened URLs across sessions.

Hotel Management System – Personal Project

- Created a web app for managing hotel operations, including both admin and customer pathways.
- Developed features for booking management, room assignments, and customer services using Supabase for backend services.

E-Commerce Store – Personal Project

- Built an e-commerce platform for a small shoe store with shopping cart functionality.
- Enabled users to easily add, view, and manage selected items in the cart.

Education

Bachelor of Engineering in Electrical Engineering
University of Ilorin – Ilorin, Nigeria

Certifications

- Skyscanner Front-End Virtual Experience Programme
- Forage Software Engineering Programme
